

DOSING DISPENSER AND RESERVOIR

Abstract of the Disclosure

A dosing dispenser for dosing at least two components, wherein the dosing dispenser has a reservoir with at least two containers, which can be combined to form the reservoir and each of which can receive one component wherein each container has at least one engagement element at least in the area facing the bottom side of the container, the at least one engagement element having at least one projecting element and at least one corresponding recessed element, wherein the containers can be combined to form the reservoir by inserting the projecting elements of each container into the recessed elements of the respective other container.
